BULLETIN No. 3.

NOV., 1891.

CENSUS OF CANADA, 1891.

BULLETIN No. 3.

DEPARTMENT OF AGRICULTURE,

OTTAWA, November, 1891.

Bulletin No. 3 relates to the population of the Eastern Maritime Provinces.

For the purpose of comparison the population returns of 1871 and 1881 are given with those of 1891, by sub-districts; also by groups arranged geographically.

Of the counties thus grouped 16 show decreases and 20 increases in population.

The Province of New Brunswick has an admirable system of sub-divisions into parishes, modelled after Virginia and Maryland, and introduced in 1786 by U. E. Loyalists from those States. Comparisons are therefore easy for all of the three Census takings since the creation of the Dominion.

The Province of Nova Scotia has no such permanent system of municipal sub-divisions. In some instances the best that could be done in order to make sure that the whole area was covered by the enumerators was to take the shifting polling district as the unit of sub-division. It is greatly to be regretted that in Nova Scotia there are no permanent sub-divisions of the counties such as New Brunswick has. The result is that investigation into the movement of population practically can be pursued no more minutely than the unit of the county.

Taking the three provinces together the population increased 13.5 per cent. in 1881 as compared with 1871, and barely 1.2 per cent. in 1891 as compared with 1881.

In view of these figures the accuracy of the count in 1891 has been questioned.

In consequence, an effort has been made in the Census branch to discover if facts justify the doubt.

The Province of Prince Edward Island was not in the Union in 1871, and there are no figures as to houses and families for 1871.

The other two Provinces had as follows :—

	1871.	1881.	1891.
Families	117,195	136,544	142,235
Houses	105,298	124,692	132,585
Increase in families.		16·5 per cent.	4·1 per cent.
Increase in houses.		18·4 per cent.	6·3 per cent.

The difference between the per cent. increases in population and in families was, in 1881, 3·1 per cent., and in 1891 it was 3 per cent. The relative position between the two remained practically the same in 1891 as in 1881, conclusively demonstrating that the enumerators visited the households. Visiting the households they would naturally take count of the individual members, or foolishly lose three cents for every one omitted.

The inhabited houses increased in 1881, 18·4 per cent., and in 1891, 6·3 per cent. The difference between the increase of the population and the increase of inhabited houses was 5 per. cent. in 1881, and 5·2 per cent. in 1891,—practically the same.

This test, though not so good an one as the family test (owing to the tendency of houses to increase faster than families in prosperous communities), is sufficiently good for the purpose, as it shows that there is no such discrepancy between the population and their shelter as would be the case if the enumerators had performed their duty of counting the people carelessly.

The general observations upon the decrease in the percentage of growth made in Bulletin No. 2 apply to the Eastern Maritime Provinces.

The family is becoming smaller. It averaged 5·74 persons in 1871, 5·57 persons in 1881, and 5·43 persons in 1891.

If the average family of 1891 were as large as that of 1871, the population of the three provinces would now be 923,198 instead of 880,842. The average of 1881 applied to 1891 would increase the population by 15,000 persons.

The causes for this decrease are : 1st the decay of early marriages, and 2nd, the increasing tendency to celibacy. The first cause is the effect of the increasingly complex conditions of life; the second is due to the spread of education which enables females to become better wage-earners and, therefore, less interested in marriage.

The tendency to reduction in the size of the average family observed in the Maritime Provinces is in accord with the teaching of all recent Census takings in other countries.

But the reduction in the average family does not account in whole for the stagnation of population revealed by the Census returns. The population has removed in larger numbers than in previous decades.

In the present Census we have provided for the ascertainment of the extent to which there has been an interprovincial distribution of the people. The analysis is not yet complete, but the partial trials made show that the people of these provinces have gone, during the past ten years, in an increasing degree, to the Western portions of our own country. The stagnation in the East is partially accounted for by the natural movement westward.

It is also accounted for by the increasing aversion to agricultural pursuits.

Other causes, no doubt, have contributed to the stagnation.

In the adjoining State of Maine, the increase of population was 1·8 per cent. in the ten years ended June, 1890.

GEO. JOHNSON,
Statistician.

RECENSEMENT DU CANADA, 1891.

BULLETIN No. 3.

DÉPARTEMENT DE L'AGRICULTURE,

OTTAWA, Novembre 1891.

Le "bulletin" No. 3 se rapporte à la population des Provinces Maritimes de l'Est.

Afin d'arriver à un tableau comparatif, les rapports de la population pour 1871 et 1881 sont donnés en même temps que ceux de 1891—par sous-districts, et aussi par groupes arrangés d'après les cartes géographiques.

Du groupement ainsi fait de ces Comtés, il en résulte que seize font voir une diminution, et vingt une augmentation de la population.

La Province du Nouveau-Brunswick possède un système admirable de subdivisions en paroisses, modelé d'après les systèmes employés dans les Etats de la Virginie et du Maryland, et introduit en 1786 par les Loyalistes E. U. de ces Etats.

Par conséquent les comparaisons sont faciles à faire pour chacun des trois recensements de cette Province, pris depuis la Confédération.

La Province de la Nouvelle-Ecosse ne possède pas un système permanent de subdivisions municipales. Dans certains cas, le mieux que nous avons pu faire pour s'assurer si toute l'étendue de territoire avait été parcourue par les énumérateurs, a été de prendre comme base de subdivision chaque district électoral, avec ses changements.

Il est très à regretter qu'il n'y ait pas dans la Nouvelle-Ecosse de subdivisions permanentes de comtés, comme dans le Nouveau-Brunswick.

Il en résulte qu'on ne saurait constater le mouvement de la popu-

lation d'une manière plus pratique et plus précise qu'en prenant l'ensemble de celle du comté.

Les trois Provinces prises ensemble, nous trouvons que la population a augmenté de 13·5 pour cent en 1881, comparée avec 1871, et simplement de 1·2 pour cent en 1891, comparée avec 1881.

En face de ces chiffres, on a douté de l'exactitude du dénombrement de 1891.

Alors on s'est efforcé au bureau du recensement de constater si les faits justifiaient un tel doute.

La Province de l'Ile du Prince-Edouard ne faisait pas partie de la Confédération en 1871, et nous n'avons aucun chiffre pour indiquer le nombre de maisons et de familles pour cette année là.

Voici, pour les deux provinces, savoir :—

	1871	1881	1891
Familles.....	117·195	136·544	142·235
Maisons.....	105·298	124·692	132·585
Augmentation, Familles		16·5 pr cent	4·1 pr cent
“ Maisons.		18·4 pr cent	6·3 pr cent

La différence entre le pourcentage de l'accroissement de la population et des membres de la famille, pour 1881 était de 3·1 pour cent, et pour 1891, 3·0 pour cent. La position relative entre les deux, prouve, d'une manière concluante, que les énumérateurs ont dû visiter les familles avec beaucoup de soin. Par cette manière de visiter chaque famille, ils ont dû naturellement énumérer les membres individuellement, ou autrement ils auraient été exposés à perdre sottement les trois cents d'honoraire pour chaque nom omis.

Le nombre des maisons habitées avaient augmenté en 1881 de 18·4 pour cent et en 1891 de 6·3 pour cent. La différence entre l'augmentation de la population des maisons habitées était en 1881 de 5 pour cent, et en 1891 de 5·2 pour cent, ce qui est pratiquement la même chose.

Bien que cette épreuve ne soit pas aussi bonne que serait une épreuve faite par famille, (vu que les maisons généralement augmentent plus vite que les familles dans les endroits prospères), elles suffit à répondre à l'objet en vue ; en autant qu'elle fait voir qu'il n'y a pas cette différence entre la population et les maisons, qui existerait, si les officiers du recensement n'avaient pas énuméré la population avec soin.

Les observations générales sur la diminution du pourcentage de l'accroissement, faites dans le Bulletin No. 2, s'appliquent aux provinces Maritimes de l'Est.

La famille décroît. En 1871 on avait une moyenne de 5·74, en 1881 5·57 et en 1891 5·43.

Si la moyenne du nombre de membres dans la famille en 1891 était aussi forte qu'en 1871, la population des trois provinces serait de 923,198, au lieu d'être de 880,842. La moyenne de 1881 appliquée à 1891, augmenterait la population de 15,000 personnes.

Les causes de cette décroissance sont :—1ère. La diminution du mariage entre jeunes gens. 2ème. La tendance toujours croissante au célibat.

La première de ces causes est le résultat de la multiplicité croissante des conditions de la vie ; la seconde est le développement de l'éducation qui met les femmes en état de gagner leur vie et ce qui fait qu'elles ont moins d'intérêt pour le mariage.

La tendance à la décroissance du nombre en moyenne de la famille qu'on a remarqué dans les provinces Maritimes, correspond à ce que nous démontrent tous les derniers recensements pris dans les autres pays.

La décroissance dans le nombre en moyenne des membres de la famille ne provient pas entièrement de la *stagnation* de la population, que nous font voir les recensements.

Le déplacement de la population durant cette dernière décade a été plus considérable que dans les décades précédentes.

Dans le recensement actuel, nous avons pris les moyens de s'assurer jusqu'à quel point a eu lieu ce déplacement interprovincial de la population.

Ce travail analytique n'est pas encore terminé, mais ce qui en est fait démontre que la population de ces provinces durant les dernières années s'est dirigée d'une manière croissante vers l'ouest de notre pays. On attribue en partie cet état de *stagnation* ci-haut mentionné, au mouvement naturel de la population vers l'ouest.

On l'attribue aussi à l'aversion toujours croissante pour les travaux agricoles. Il y a sans doute d'autres causes qui ont contribué à cette *stagnation*.

Dans l'Etat voisin du Maine, l'augmentation de la population a été de 1·8 pour cent durant les dix dernières années expirées en Juin 1890.

GEO. JOHNSON, *Statisticien*.
